

Speech Studio

PROBLEM

Teams need controllable synthetic narration for their internal workflows.

DEMONSTRATED WORKFLOW

Prepare English text, synthesize a local WAV, play it and download the output.

ENGINEERING DEMONSTRATED

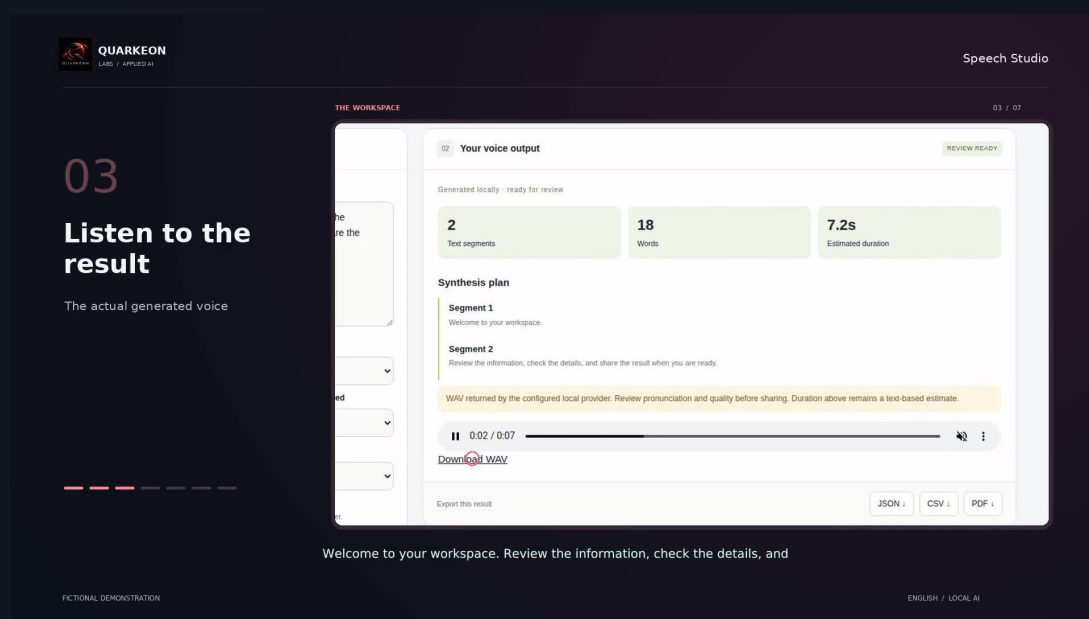

Explicit voice settings, segmented text and validated PCM output.

MEASURED SYNTHETIC EVIDENCE

8/8 cases completed. pcm format valid: 8/8; sample rate 24000: 8/8; duration positive: 8/8.

PILOT SCOPE

A private text-to-speech integration using licensed local voices. A scoped pilot would agree on: Voice/model licensing, supported languages, pronunciation checks and output format. This demo does not clone voices. The pilot deliverables are an agreed dataset, working workflow, review interface, measured acceptance report and handover. Production access control, external integrations and deployment are scoped explicitly for the intended environment.

Working demonstration on fictional data. Synthetic regression figures are not production accuracy or client business outcomes. Human review remains required.
